

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A secondary cell electrode comprising an electrode active material layer having a density gradient **and a nonaqueous electrolyte cell-oriented electrode in which the electrode active material layer is formed on a collector, having the density gradient developed with a gradient of a solid concentration increasing along a thickness from a surface of the electrode active material layer toward the collector.**
2. (Cancelled)
3. (Currently Amended) The secondary cell electrode as claimed in claim ~~[[2]]~~ **1**, wherein the electrode active material layer comprises a plurality of laminated thin film layers different in the solid concentration.
4. (Currently Amended) The secondary cell electrode as claimed in claim ~~[[2]]~~ **1**, wherein the solid concentration is a concentration of an electrode active material.
5. (Currently Amended) The secondary cell electrode as claimed in claim ~~[[2]]~~ **1**, wherein the solid concentration includes concentrations of an electrode active material, an electrically conductive material, and a binder.
6. (Currently Amended) The secondary cell electrode as claimed in claim ~~[[2]]~~ **1**, wherein the electrode active material layer has a thickness within a range of 1-100 μm .
7. (Original) The secondary cell electrode as claimed in claim 1, comprising a gel electrolyte cell-oriented electrode in which the electrode active material layer is formed on a collector, having the density gradient developed with a gradient of a concentration of an electrolyte salt along a thickness from a surface of the electrode active material layer toward the collector.

8. (Original) The secondary cell electrode as claimed in claim 7, wherein the electrode active material layer comprises a plurality of laminated thin film layers different in concentration of the electrolyte salt.
9. (Currently Amended) ~~The secondary cell electrode as claimed in claim 1,~~
A secondary cell electrode comprising an electrode active material layer having a density gradient comprising a gel electrolyte cell-oriented electrode in which the electrode active material layer is formed on a collector, having the density gradient developed with a gradient of a concentration of a film forming material along a thickness from a surface of the electrode active material layer toward the collector.
10. (Original) The secondary cell electrode as claimed in claim 9, wherein the electrode active material layer comprises a plurality of laminated thin film layers different in concentration of the film forming material.
11. (Currently Amended) ~~The secondary cell electrode as claimed in claim 1,~~
A secondary cell electrode comprising an electrode active material layer having a density gradient comprising a gel electrolyte cell-oriented electrode in which the electrode active material layer is formed on a collector, having the density gradient developed with gradients of concentrations of an electrolyte salt and a film forming material along a thickness from a surface of the electrode active material layer toward the collector.
12. (Original) The secondary cell electrode as claimed in claim 11, wherein the electrode active material layer comprises a plurality of laminated thin film layers different in concentrations of the electrolyte salt and the film forming material.
13. (Original) The secondary cell electrode as claimed in claim 1, wherein the electrode active material layer has a thickness within a range of 1-100 μm .

14. (Currently Amended) A fabrication method comprising fabricating a secondary cell electrode comprising an electrode active material layer having a density gradient, wherein the secondary cell electrode comprises a nonaqueous electrolyte cell-oriented electrode, the method further comprising:

(a) changing a quantity of a solid to be added to compose the electrode active material layer, thereby preparing a plurality of kinds of electrode slurry different in concentration of the solid; and

(b) coating a collector with the plurality of kinds of electrode slurry so that the density gradient is developed with a gradient of a concentration of the solid sequentially increased from a surface of the electrode active material layer toward the collector, thereby laminating a plurality of thin film layers different in concentration of the solid.

15. (Cancelled)

16. (Withdrawn-Currently Amended) The fabrication method as claimed in claim [[15]] 14, wherein at least one of the thin film layers is coated by a thickness within a range of 1-100 μm in the step (b).

17. (Withdrawn-Currently Amended) The fabrication method as claimed in claim [[15]] 14, wherein the electrode slurry is coated onto the collector by an ink jet method in the step (b).

18. (Withdrawn) The fabrication method as claimed in claim 17, wherein the ink jet method employs a piezo system.

19. (Cancelled)

20. (Cancelled)

21. (Cancelled)

- 22. (Cancelled)
- 23. (Cancelled)
- 24. (Cancelled)
- 25. (Cancelled)
- 26. (Cancelled)
- 27. (Cancelled)
- 28. (Cancelled)
- 29. (Cancelled)
- 30. (Cancelled)
- 31. (Withdrawn) A secondary cell comprising the secondary cell electrode of claim 1.
- 32. (Withdrawn) The secondary cell as claimed in claim 31, wherein the secondary cell is a lithium ion secondary cell.
- 33. (Withdrawn) The secondary cell as claimed in claim 31, wherein the secondary cell is a bipolar cell.
- 34. (Withdrawn) The secondary cell as claimed in claim 31, comprising:
 - a positive electrode comprising a first collector, and a positive-electrode oriented active material layer having a gradient of an electrolyte salt concentration increasing along a thickness from a surface of the positive-electrode oriented active material layer toward the first collector;

a negative electrode comprising a second collector, and a negative-electrode oriented active material layer having a gradient of an electrolyte salt concentration decreasing along a thickness from a surface of the negative-electrode oriented active material layer toward the second collector; and
an electrolyte layer.

35. (Withdrawn) The secondary cell as claimed in claim 31, comprising:

a positive electrode comprising a first collector, and a positive-electrode oriented active material layer having a gradient of an electrolyte salt concentration decreasing along a thickness from a surface of the positive-electrode oriented active material layer toward the first collector;

a negative electrode comprising a second collector, and a negative-electrode oriented active material layer having a gradient of an electrolyte salt concentration increasing along a thickness from a surface of the negative-electrode oriented active material layer toward the second collector; and

an electrolyte layer.

36. (Withdrawn) The secondary cell as claimed in claim 34, wherein the negative-electrode oriented active material layer has a gradient of a film forming material concentration increasing along the thickness from the surface of the negative-electrode oriented active material layer toward the second collector.

37. (Withdrawn) The secondary cell as claimed in claim 35, wherein the negative-electrode oriented active material layer has a gradient of a film forming material concentration increasing along the thickness from the surface of the negative-electrode oriented active material layer toward the second collector.

38. (Withdrawn) The secondary cell as claimed in claim 31, wherein the electrode active material layer comprises a negative-electrode oriented active material layer having a gradient of a film forming material concentration increasing along a thickness from a surface of the negative-electrode oriented active material layer surface toward a collector.

39. (Withdrawn) The secondary cell as claimed in claim 31, wherein the density gradient is developed with a concentration gradient of an ingredient of the active material layer of the secondary cell electrode.
40. (Withdrawn) A complex cell comprising a plurality of secondary cells according to claim 1 which are connected to each other.
41. (Withdrawn) A complex cell comprising a plurality of secondary cells fabricated by the fabrication method of claim 14 which are connected to each other.
42. (Withdrawn) A vehicle including a secondary cell electrode according to claim 1.
43. (Withdrawn) A vehicle including a secondary cell electrode fabricated by the fabrication method of claim 14.
